

TSIS 1 + TSIS 2 — Project Initiation and Idea List

1. Project / Idea Description

Project name: Student Marketplace

Problem. University students routinely buy and sell secondhand textbooks, gadgets, furniture, clothing, and other belongings on Telegram or WhatsApp chat, or through general trading platforms. Since the specified channels are not created for college students, it's tough to find relevant offers, the listings can get lost in conversation threads, and there is no organized way to search through and manage student-to-student sales.

Proposed solution. Student Marketplace is a web-based platform specifically designed for university students to buy and sell various goods to each other. Users will be able to create product listings with pictures, descriptions, pricing, and categories, check items that other users posted, search/filter for posted goods, and contact sellers. The platform will provide simplicity in interface and ease in student-to-student communication.

Target audience. University students who are looking to purchase or sell secondhand books, electronics, furniture, clothes, and other belongings.

Expected deliverable (MVP). A functioning web prototype that consists of student registration and login, product listing creation, category definition, searching and filtering capabilities, product information pages, seller contacts, and basic listing management.

Alignment with course goals. The project offers the chance to

implement project initiation, project scope definition, WBS, RACI, stakeholder management, prioritization of features, and project management throughout the semester. The initial scope is limited to the MVP in order to keep the time, cost and scope constraints in hand.

2. RACI Matrix

Roles:

- **PM** — Yeszhanov Aliaskar
- **DEV** — Zhakanov Bolat
- **UX** — Khamitov Aibar
- **QA** — Madeniyetov Azamat
- **SPON** — Ruslan Zhulduzbayev

Task / Activity	PM	DEV	UX	QA	SPON
Define project scope & MVP	A	C	C	I	C
Identify student user needs	A/ R	I	R	I	I
Define requirements & user stories	A	C	C	C	I
Create UI wireframes and prototype	C	C	A/ R	I	I
Setup repository and project architecture	C	A/R	I	C	I
Implement registration & login	I	A/R	C	C	I
Implement product listings & categories	C	A/R	C	C	I
Implement search & filtering	C	A/R	C	C	I
Implement seller contact & favorites	C	A/R	C	C	I
Test MVP and fix bugs	C	R	I	A/ R	I

Prepare demo and documentation	A/ R	C	C	C	I
Submit TSIS / course artifacts	A/ R	C	I	I	I

Legend: R = Responsible, A = Accountable, C = Consult, I = Inform.
Each task has exactly one accountable role.

3. List of Stakeholder's Expectations

Stakeholders	Role	Expectation	Priority	How To Manage?
Student buyers	Customer	Simple search & access to product information with ease of communication with sellers.	High	Conduct interviews & usability tests with students prior to finalizing the MVP.
Student sellers	Customer	Straightforward process of listing items for sale, a fair display of products, rapid contact with buyers.	High	Provide the easiest listing form & test it with students.
Course instructor	Parent organization/ Sponsoring org	The project meets course criteria & demonstrates correct project management practices.	High	Regular reviews of the project progress & align it with the TSIS.

Members of project team	Project team	Well-defined roles, reasonable workload, and adequate project scope.	High	Apply RACI, WBS, and sprints/task planning.
University/ Student services	Parent organization	The platform is suitable for the student community and does not generate extra administrative issues.	Medium	Set up initial rules of the platform.
Campus community	Public/ External	Safe and respectful communication among students.	Medium	Develop reporting mechanism and rules of using the platform.

4. Idea List

#	Idea	Why
1	Student-only marketplace	Creates a platform focused specifically on university students and their needs
2	Categories for student items	Makes books, electronics, furniture, clothes, and other products easier to find
3	Search and filtering	Reduces the time users spend looking through irrelevant listings
4	Campus pickup / location information	Makes local transactions between students more convenient

5	Seller ratings and reviews	Can provide additional information about previous transactions
6	Favorites / wishlist	Allows students to save interesting products for later
7	In-platform messaging	Gives buyers and sellers a dedicated way to discuss products
8	Listing reporting system	Helps users report inappropriate, misleading, or suspicious listings

5. Initial Features List

Feature	Description	Why (user value)	Priority
User registration & login	Account creation using email or university credentials	Provides personalized accounts and basic access control	Must
Create product listing	Seller adds title, description, price, category, photos, and condition	Makes it easy for students to sell their items	Must
Browse product categories	Products are organized into categories such as Books, Electronics, Furniture, and Clothes	Helps users quickly find relevant products	Must
Search products	Search listings by title or keywords	Saves time when looking for a specific item	Must

Filter and sort listings	Filter by category, price, condition, and other basic parameters	Helps users narrow down available products	Must
Product details page	Displays photos, description, price, condition, and seller information	Gives buyers the information needed before contacting a seller	Must
Seller contact / messaging	Allows buyers to contact sellers about products	Supports communication and transaction arrangements	Should
Edit / delete own listing	Sellers can update or remove their active listings	Keeps marketplace information accurate	Should
Favorites	Users can save products they are interested in	Allows students to return to products later	Should
Report listing or user	Users can report inappropriate or suspicious content	Supports basic marketplace safety and moderation	Should
Student verification	Optional verification that a user belongs to the university	Can increase trust between buyers and sellers	Could
Ratings and reviews	Users can leave feedback after a transaction	Provides additional information about seller reliability	Could
